SUBJECT INDEX

Aberration corrected holographically recorded diffraction gratings, 72
Adjustable mosaic grating mounts, 225
Analysis of reflection gratings, multiwave, 112
Angle-resolved light scattering from composite optical surfaces, 296
Anomalies and coupling phenomenon, guided waves on corrugated surfaces and their link with grating, 139
Anomalies of gratings, increase in Raman excitation of surface polaritons with surface roughness explained in terms of Wood, 255
Aperture component, spectral shaped, 185
Applications, ion-etched gratings for laser, 63

Beam sampler—a versatile high energy laser (HEL) diagnostic tool, hole grating, 232
Beam sampling, design of holographic gratings on primary mirrors for, 56
Blaze characteristics, Echelle efficiency and, 171
Blazed holographic gratings—formation by surface waves and replication by metal electroforming, 5
Blazed ion-etched holographic gratings, high-spectroscopic qualities in, 69
Buried long period grating for laser applications, 211

Classical and crossed gratings, experimental investigation in microwave range of diffraction by, 263
Coherence theory and the Lau effect, Fresnel images, 155
Component, spectral shaped aperture, 185
Composite optical surfaces, angle-resolved light scattering from, 296
Compound interlaced grating for high energy laser systems, development of a, 283
Conducting plates: numerical solution, surface grating on dielectric slab waveguide between parallel perfectly, 118
Configurations, one hundred percent efficiency of gratings in non-Littrow, 165
Constants of excitons and excitonic molecules, tunable picosecond transient grating method to determine the diffusion, 230
Control systems, some ideas on ruling engine, 306
Corrected holographically recorded diffraction gratings, aberration, 72
Corrugated surfaces and their link with grating anomalies and coupling phenomenon, guided waves on, 139
Coupled-wave theory and modal theory, planar grating diffraction: multiwave, 132
Coupling phenomenon, guided waves on corrugated surfaces and their link with grating anomalies and, 139
Coupling of two guided-waves by a grating with varying period, numerical study of the, 107
Crossed gratings, experimental investigation in microwave range of diffraction by classical and, 263

Defects in mechanical surfaces diagnosed through diffraction phenomena analysis, periodic structure, 323
Defects, Moiré topography for the detection of orthopaedic, 293
Dependent phase shift in high-efficiency gratings, polarization-, 249
Depth of holographic gratings, a simple method for determining the groove, 102
Design of holographic gratings on primary mirrors for beam sampling, 56
Detection of orthopaedic defects, Moiré topography for the, 293
Development of a compound interlaced grating for high energy laser systems, 283
Diagnosed through diffraction phenomena analysis, periodic structure defects in mechanical surfaces, 323
Diagnostic for jittered arrays of periodic structures, use of diffraction patterns as a regularity, 278
Diagnostic tool, hole grating beam sampler—a versatile high energy laser (HEL), 232
Dielectric slab waveguide between parallel perfectly conducting plates: numerical solution, surface grating on, 118
Differential formalism for high-modulated gratings, new improvement of the, 147
Differential method, diffraction of light by gratings studied with the, 90
Diffraction by classical and crossed gratings, experimental investigation in microwave range of, 263
Diffraction grating efficiencies in the vacuum ultraviolet, measurements of, 203
Diffraction grating theory, high-efficiency, 128
Diffraction gratings, aberration corrected holographically, 72
Diffraction gratings ruled and holographic—a review, 82
Diffraction gratings, scattering from high efficiency, 243
Diffraction of light by gratings studied with the differential method, 90
Diffraction: multiwave coupled-wave theory and modal theory, planar grating, 132
Diffraction patterns as a regularity diagnostic for jittered arrays of periodic structures, use of, 278
Diffraction phenomena analysis, periodic structure defects in mechanical surfaces diagnosed through, 323
Diffusion constants of excitons and excitonic molecules, tunable picosecond transient grating method to determine the, 230

Echelle efficiency and blaze characteristics, 171
Efficiencies in the vacuum ultraviolet, measurements of diffraction grating, 203
Efficiency and blaze characteristics, Echelle, 171
Efficiency diffraction grating theory, high-, 128
Efficiency diffraction gratings, scattering from high, 243

Efficiency of gratings in non-Littrow configurations, one hundred percent, 165
Efficiency gratings, polarization-dependent phase shift in high-, 249
Electroforming, blazed holographic gratings—formation by surface waves and replication by metal, 5
Energy laser (HEL) diagnostic tool, hole grating beam sampler—a versatile high, 232
Energy laser systems, development of a compound interlaced grating for high, 283
Engine control systems, some ideas on ruling, 306
Etched gratings for laser applications, ion-, 63
Etched holographic gratings, high-spectroscopic qualities in blazed ion-, 69
Excitation of surface polaritons with surface roughness explained in terms of Wood anomalies of gratings, increase in Raman, 255
Excitonic molecules, tunable picosecond transient grating method to determine the diffusion constants of excitons and, 230
Excitons and excitonic molecules, tunable picosecond transient grating method to determine the diffusion constants of, 230
Experimental investigation in microwave range of diffraction by classical and crossed gratings, 263
Exposing interference pattern in holographic grating production, stabilization of the, 22

Fabrication techniques, holographic surface grating, 13
Formalism for high-modulated gratings, new improvement of the differential, 147
Formation by surface waves and replication by metal electroforming, blazed holographic gratings—, 5
Fourier gratings, optimization of, 311
Fresnel images, coherence theory and the Lau effect, 155

Grating anomalies and coupling phenomenon, guided waves on corrugated surfaces and their link with, 139
Grating beam sampler—a versatile high energy laser (HEL) diagnostic tool, hole, 232
Grating development at Lockheed Palo Alto Research Laboratory, holographic, 38
Grating on dielectric slab waveguide between parallel perfectly conducting plates: numerical solution, surface, 118
Grating diffraction: multiwave coupled-wave theory and modal theory, planar, 132
Grating efficiencies in the vacuum ultraviolet, measurements of diffraction, 203
Grating fabrication techniques, holographic surface, 13
Grating for high energy laser systems, development of a compound interlaced, 283
Grating for laser applications, buried long period, 211
Grating method to determine the diffusion constants of excitons and excitonic molecules, tunable picosecond transient, 230
Grating mounts, adjustable mosaic, 225
Grating production, stabilization of the exposing interference pattern in holographic, 22
Grating profile reconstruction, 97
Grating theory, high-efficiency diffraction, 128
Grating with varying period, numerical study of the coupling of two guided-waves by a, 107
Gratings, aberration corrected holographically diffraction, 72
Gratings, experimental investigation in microwave range of diffraction by classical and crossed, 263
Gratings—formation by surface waves and replication by metal electroforming, blazed holographic, 5
Gratings, high-spectroscopic qualities in blazed ion-etched holographic, 69
Gratings, increase in Raman excitation of surface polaritons with surface roughness explained in terms of Wood anomalies of, 255
Gratings at the Institute of Optical Research, Stockholm, holographic, 44
Gratings for laser applications, ion-etched, 63
Gratings-manufacture and test results, triangular and sinusoidal grooves in holographic, 27
Gratings, multiwave analysis of reflection, 112
Gratings, new improvement of the differential formalism for high-modulated, 147
Gratings in non-Littrow configurations, one hundred percent efficiency of, 165
Gratings, optimization of Fourier, 311
Gratings, polarization-dependent phase shift in high-efficiency, 249
Gratings, power losses in lamellar, 178
Gratings on primary mirrors for beam sampling, design of holographic, 56
Gratings ruled and holographic—a review, diffraction, 82
Gratings, scattering from high efficiency diffraction, 243
Gratings, a simple method for determining the groove depth of holographic, 102
Gratings, soft x-ray transmission, 52
Gratings studied with the differential method, diffraction of light by, 90
Gratings for ultraviolet spectroscopy, interference, 318
Gratings, vacuum ultraviolet, 223
Groove depth of holographic gratings, a simple method for determining the, 102
Grooves in holographic gratings-manufacture and test results, triangular and sinusoidal, 27
Guided waves on corrugated surfaces and their link with grating anomalies and coupling phenomenon, 139
Guided-waves by a grating with varying period, numerical study of the coupling of two, 107

(HEL) diagnostic tool, hole grating beam sampler—a versatile high energy laser, 232
High-efficiency diffraction grating theory, 128
High efficiency diffraction gratings, scattering from, 243
High efficiency-gratings, polarization-dependent phase shift in, 249
High energy laser (HEL) diagnostic tool, hole grating beam sampler—a versatile, 232
High energy laser systems, development of a compound interlaced grating for, 283
High-modulated gratings, new improvement of the differential formalism for, 147
High-spectroscopic qualities in blazed ion-etched holographic gratings, 69
Hole grating beam sampler—a versatile high energy laser (HEL) diagnostic tool, 232
Holographic elements, wavelength scaling, 2
Holographic grating development at Lockheed Palo Alto Research Laboratory, 38
Holographic grating production, stabilization of the exposing interference pattern in, 22
Holographic gratings—formation by surface waves and replication by metal electroforming, blazed, 5
Holographic gratings, high-spectroscopic qualities in blazed ion-etched, 69
Holographic Gratings at the Institute of Optical Research, Stockholm, 44
Holographic gratings-manufacture and test results, triangular and sinusoidal grooves in, 27
Holographic gratings on primary mirrors for beam sampling, design of, 56
Holographic gratings, a simple method for determining the groove depth of, 102
Holographic—a review, diffraction gratings ruled and, 82
Holographic surface grating fabrication techniques, 13
Holographically recorded diffraction gratings, aberration corrected, 72
Hundred percent efficiency of gratings in non-Littrow configurations, one, 165

Images, coherence theory and the Lau effect, Fresnel, 155
Improvement of the differential formalism for high-modulated gratings, new, 147
Increase in Raman excitation of surface polaritons with surface roughness explained in terms of Wood anomalies of gratings, 255
Interference gratings for ultraviolet spectroscopy, 318

Interference pattern in holographic grating production, stabilization of the exposing, 22
Interlaced grating for high energy laser systems, development of a compound, 283

Ion-etched gratings for laser applications, 63
Ion-etched holographic gratings, high-spectroscopic qualities in blazed, 69

Jittered arrays of periodic structures, use of diffraction patterns as a regularity diagnostic for, 278

Lamellar gratings, power losses in, 178
Laser applications, buried long period grating for, 211
Laser applications, ion-etched gratings for, 63
Laser (HEL) diagnostic tool, hole grating beam sampler—a versatile high energy, 232
Laser systems, development of a compound interlaced grating for high energy, 283
Lau effect, Fresnel images, coherence theory and the, 155
Light by gratings studied with the differential method, diffraction of, 90
Light scattering from composite optical surfaces, angle-resolved, 296
Lithography with metallo-organic resists, 4
Littrow configurations, one hundred percent efficiency of gratings in non-, 165
Lockheed Palo Alto Research Laboratory, holographic grating development at, 38
Long period grating for laser applications, buried, 211

Manufacture and test results, triangular and sinusoidal grooves in holographic gratings-, 27
Measurements of diffraction grating efficiencies in the vacuum ultraviolet, 203
Mechanical surfaces diagnosed through diffraction phenomena analysis, periodic structure defects in, 323
Metal electroforming, blazed holographic gratings—formation by surface waves and replication by, 5
Metallo-organic resists, lithography with, 4
Method for determining the groove depth of holographic gratings, a simple, 102
Microwave range of diffraction by classical and crossed gratings, experimental investigation in, 263
Mirrors for beam sampling, design of holographic gratings on primary, 56
Modal theory, planar grating diffraction: multiwave coupled-wave theory and, 132
Modulated gratings, new improvement of the differential formalism for high-, 147
Moiré topography for the detection of orthopaedic defects, 293
Molecules, tunable picosecond transient grating method to determine the diffusion constants of excitons and excitonic, 230
Mosaic grating mounts, adjustable, 225
Mounts, adjustable mosaic grating, 225
Multiwave analysis of reflection gratings, 112
Multiwave coupled-wave theory and modal theory, planar grating diffraction:, 132

New improvement of the differential formalism for high-modulated gratings, 147
Non-Littrow configurations, one hundred percent efficiency of gratings in, 165
Numerical solution, surface grating on dielectric slab waveguide between parallel perfectly conducting plates:, 118
Numerical study of the coupling of two guided-waves by a grating with varying period, 107

One hundred percent efficiency of gratings in non-Littrow configurations, 165
Optical surfaces, angle-resolved light scattering from composite, 296
Optimization of Fourier gratings, 311
Organic resists, lithography with metallo-, 4
Orthopaedic defects, Moiré topography for the detection of, 293

Parallel perfectly conducting plates: numerical solution, surface grating on dielectric slab waveguide between, 118
Pattern in holographic grating production, stabilization of the exposing interference, 22
Patterns as a regularity diagnostic for jittered arrays of periodic structures, use of diffraction, 278
Percent efficiency of gratings in non-Littrow configurations, one hundred, 165
Perfectly conducting plates: numerical solution, surface grating on dielectric slab waveguide between parallel, 118
Period, numerical study of the coupling of two guided-waves by a grating with varying, 107
Periodic structure defects in mechanical surfaces diagnosed through diffraction phenomena analysis, 323
Periodic structures, use of diffraction patterns as a regularity diagnostic for jittered arrays of, 278
Phase shift in high-efficiency gratings, polarization-dependent, 249
Phenomena analysis, periodic structure defects in mechanical surfaces diagnosed through diffraction, 323
Picosecond transient grating method to determine the diffusion constants of excitons and excitonic molecules, tunable, 230
Planar grating diffraction: multiwave coupled-wave theory and modal theory, 132
Plates: numerical solution, surface grating on dielectric slab waveguide between parallel perfectly conducting, 118
Polaritons with surface roughness explained in terms of Wood anomalies of gratings, increase in Raman excitation of surface, 255
Polarization-dependent phase shift in high-efficiency gratings, 249
Power losses in lamellar gratings, 178
Primary mirrors for beam sampling, design of holographic gratings on, 56
Production, stabilization of the exposing interference pattern in holographic grating, 22
Profile reconstruction, grating, 97

Raman excitation of surface polaritons with surface roughness explained in terms of Wood anomalies of gratings, increase in, 255
Reconstruction, grating profile, 97
Recorded diffraction gratings, aberration corrected holographically, 72
Reflection gratings, multiwave analysis of, 112
Regularity diagnostic for jittered arrays of periodic structures, use of diffraction patterns as a, 278
Replication by metal electroforming, blazed holographic gratings—formation by surface waves and, 5
Resists, lithography with metallo-organic, 4
Resolved light scattering from composite optical surfaces, angle-, 296
Results, triangular and sinusoidal grooves in holographic gratings-manufacture and test, 27
Review, diffraction gratings ruled and holographic—a, 82
Roughness explained in terms of Wood anomalies of gratings, increase in Raman excitation of surface polaritons with surface, 255
Ruled and holographic—a review, diffraction gratings, 82
Ruling engine control systems, some ideas on, 306
Ruling on unusual surfaces, 201

Sampler—a versatile high energy laser (HEL) diagnostic tool, hole grating beam, 232
Sampling, design of holographic gratings on primary mirrors for beam, 56
Scaling holographic elements, wavelength, 2
Scattering from composite optical surfaces, angle-resolved light, 296
Scattering from high efficiency diffraction gratings, 243
Shaped aperture component, spectral, 185
Shift in high-efficiency gratings, polarization-dependent phase, 249
Simple method for determining the groove depth of holographic gratings, a, 102

Sinusoidal grooves in holographic gratings-manufacture and test results, triangular and, 27
Slab waveguide between parallel perfectly conducting plates: numerical solution, surface grating on dielectric, 118
Soft x-ray transmission gratings, 52
Solution, surface grating on dielectric slab waveguide between parallel perfectly conducting plates: numerical, 118
Some ideas on ruling engine control systems, 306
Spectral shaped aperture component, 185
Spectroscopic qualities in blazed ion-etched holographic gratings, high-, 69
Spectroscopy, interference gratings for ultraviolet, 318
Stabilization of the exposing interference pattern in holographic grating production, 22
Structure defects in mechanical surfaces diagnosed through diffraction phenomena analysis, periodic, 323
Structures, use of diffraction patterns as a regularity diagnostic for jittered arrays of periodic, 278
Surface grating on dielectric slab waveguide between parallel perfectly conducting plates: numerical solution, 118
Surface grating fabrication techniques, holographic, 13
Surface polaritons with surface roughness explained in terms of Wood anomalies of gratings, increase in Raman excitation of, 255
Surface roughness explained in terms of Wood anomalies of gratings, increase in Raman excitation of surface polaritons with, 255
Surface waves and replication by metal electroforming, blazed holographic gratings—formation by, 5
Surfaces, angle-resolved light scattering from composite optical, 296
Surfaces diagnosed through diffraction phenomena analysis, periodic structure defects in mechanical, 323
Surfaces, ruling on unusual, 201
Systems, some ideas on ruling engine control, 306

Test results, triangular and sinusoidal grooves in holographic gratings-manufacture and, 27
Theory, high-efficiency diffraction grating, 128
Theory and the Lau effect, Fresnel images, coherence, 155
Theory and modal theory, planar grating diffraction: multiwave coupled-wave, 132
Tool, hole grating beam sampler—a versatile high energy laser (HEL) diagnostic, 232
Topography for the detection of orthopaedic defects, Moiré, 293
Transient grating method to determine the diffusion constants of excitons and excitonic molecules, tunable picosecond, 230
Transmission gratings, soft x-ray, 52
Triangular and sinusoidal grooves in holographic gratings-manufacture and test reults, 27
Tunable picosecond transient grating method to determine the diffusion constants of excitons and excitonic molecules, 230
Two guided-waves by a grating with varying period, numerical study of the coupling of, 107

Ultraviolet gratings, vacuum, 223
Ultraviolet, measurements of diffraction grating efficiencies in the vacuum, 203
Ultraviolet spectroscopy, interference gratings for, 318
Unusual surfaces, ruling on, 201
Use of diffraction patterns as a regularity diagnostic for jittered arrays of periodic structures, 278

Vacuum ultraviolet gratings, 223
Vacuum ultraviolet, measurements of diffraction grating efficiencies in the, 203
Varying period, numerical study of the coupling of two guided-waves by a grating with, 107

Waveguide between parallel perfectly conducting plates: numerical solution, surface grating on dielectric slab, 118
Wavelength scaling holographic elements, 2
Waves by a grating with varying period, numerical study of the coupling of two guided-, 107
Waves on corrugated surfaces and their link with grating anomalies and coupling phenomenon, guided, 139
Waves and replication by metal electroforming, blazed holographic gratings—formation by surface, 5
Wood anomalies of gratings, increase in Raman excitation of surface polaritons with surface roughness explained in terms of, 255

X-ray transmission gratings, soft, 52
